Types of land waste

Household waste

These are wastes received from the daily activities of people in their homes, in commercial sites, in recreational and entertainment facilities.

Wastes from agricultural activity

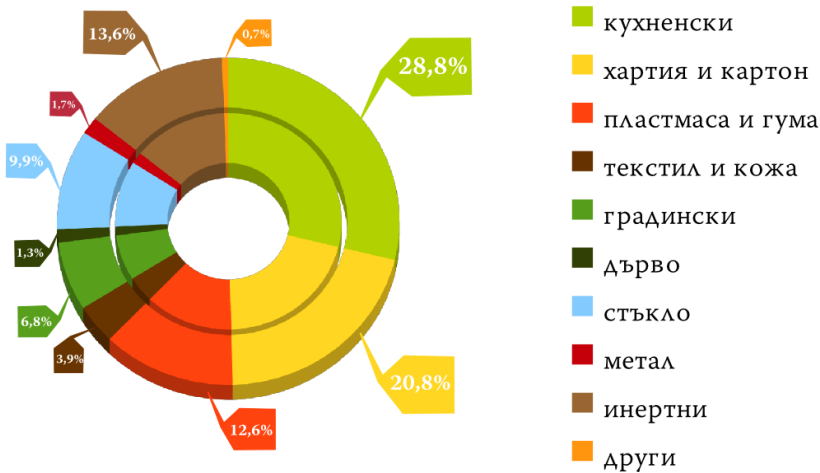

They contain all kinds of residues and waste products from plant and animal husbandry.

Biodegradable waste

Waste products which, in the presence of oxygen and water, may be composted or subjected to anaerobic digestion.

Морфологичен състав на събраните смесено битови отпадъци.

*ДАННИТЕ ЗА МОРФОЛОГИЧНИЯ СЪСТАВ НА СМЕСЕНИ ОТПАДЪЦИТЕ СА ЦИТИРАНИ ОТ АНАЛИЗА НА МОРФОЛОГИЧНИЯ СЪСТАВ НА БИТОВИТЕ ОТПАДЪЦИ СЪБРАНИ В КОНТЕЙНЕРИТЕ ЗА СМЕСЕНО СЪБИРАНЕ ИЗВЪРШЕН ОТ "ААРА 2000"

Types of land waste

Industrial waste

Also called industrial wastes or industrial wastes. They represent all kinds of waste products from the production activity in different economic sectors and institutions.

Construction waste

This category of waste includes a variety of materials that are easily recyclable, excluding organic waste. Dry and recyclable waste includes glass, packaging, textiles, paper

How long does the waste decompose in nature after disposal

Waste

Household waste decomposes in about 450 years

Biodegradable waste

Biodegradable waste degrades in an average of one month, and some take longer

How long does the waste decompose in nature after disposal

Wastes from agricultural activity

Agricultural waste is decomposed
in an average of one year

Industrial waste

It takes thousands of years to
decompose industrial waste

How long does the waste decompose in nature after disposal

Construction waste

Construction waste decomposes
in about 10 years

Toxic waste

Toxic waste decomposes
over thousands of years

How long does the waste decompose in nature after disposal

Medical waste

Medical waste has been decomposing for decades.

Mine waste

They decompose in an average of 500 years

Dry and recyclable waste

Their decomposition is very long about 1 000 00

Thank you for
your attention!
